Application No. Applicant(s) 10/007,393 HOCHMAN ET AL. Interview Summary Examiner Art Unit Jeffrey G. Hoekstra 3736 All participants (applicant, applicant's representative, PTO personnel): (1) Jeffrey G. Hoekstra. (3)Robert W. Becker. (2) Charles A. Marmor, II. (4) Marilyn Chimes. Date of Interview: 04 October 2007. Type: a) \boxtimes Telephonic b) \square Video Conference c) Personal [copy given to: 1) applicant 2) applicant's representative Exhibit shown or demonstration conducted: d) Yes e) No. If Yes, brief description: _____. Claim(s) discussed: 1. Identification of prior art discussed: n/a. Agreement with respect to the claims f) was reached. g) was not reached. h) \times N/A. Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: See Continuation Sheet. (A fuller description, if necessary, and a copy of the amendments which the examiner agreed would render the claims allowable, if available, must be attached. Also, where no copy of the amendments that would render the claims allowable is available, a summary thereof must be attached.) THE FORMAL WRITTEN REPLY TO THE LAST OFFICE ACTION MUST INCLUDE THE SUBSTANCE OF THE INTERVIEW. (See MPEP Section 713.04). If a reply to the last Office action has already been filed, APPLICANT IS GIVEN A NON-EXTENDABLE PERIOD OF THE LONGER OF ONE MONTH OR THIRTY DAYS FROM THIS INTERVIEW DATE, OR THE MAILING DATE OF THIS INTERVIEW SUMMARY FORM, WHICHEVER IS LATER, TO FILE A STATEMENT OF THE SUBSTANCE OF THE INTERVIEW. See Summary of Record of Interview requirements on reverse side or on attached sheet.

CHARLES A. MARMOR II SUPERVISORY PATENT EXAMINER TECHNOLOGY CENTER 3700

Examiner Note: You must sign this form unless it is an Attachment to a signed Office action.

Examiner's signature, if required

Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments:

Applicant and Examiner discussed the outstanding Final Office Action mailed 05/09/2007, replacement drawings, and proposed amendments to the claims.

Applicant and Examiner agreed the replacement drawings appeared to obviate the objections thereto.

Applicant and Examiner discussed the proposed amendments with regards to 35 USC 112.1 and agreed they appeared to render the outstanding 112.1 rejections moot and did not appear to necessitate new 112.1 rejections.

Also, the Examiner noted the proposed claim amendments may be subject to a Requirement for Restriction/Election.

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

I hereby certify that this correspondence is being transmitted to the US Patent Office via facsimile to (571) 273-4730 on 01 October 2007.

PROPOSED CLAIMS FOR RCE AND INTERVIEW

Dear Sir:

I appreciate your willingness to conduct a telephone interview with us this Thursday, October 4, 2007 at 3:00 PM, Eastern time, to discuss whether our proposed RCE claims (attached) are properly addressing at least the 35 U.S.C. 112 issues that you have raised. We will point out, especially in the rew claims, the limitations that we have added.

Also attached are a copy of an Associate Power of Attorney and proposed replacement drawing sheets to show the antenna 40, 40' in the probe and controller respectively.

Respectfully submitted,

Robert W. Becker, Reg. 26,255 Attorney for Applicant(s)

AMENDMENTS TO THE CLAIMS

The following listing of the claims replaces all prior versions and listir gs of claims in this application.

Listing of the Claims

A. Claim Text With Markings

1. (Currently amended) A system for at least one of transducing vaginal conditions, affecting vaginal or body conditions, and stimulating perineal musculature an lor nerves, in humans, comprising:

a single, separate unit in the form of a portable, non implanted substantially cylindrical, combination probe, which integrates a transceiver, antenna, programmable microprocessor, and power source; has a substantially smooth and substantially sealed outer surface; and is adapted to ergonomically be inserted into, be removed from, and be entirely contained within athe human's own vagina; and is provided with means for at least one of sensing and transducing a vaginal conditions; delivering signals are medication, and substantially annular means for stimulating perineal musculature and/or nerves, wherein said substantially annular means is substantially flush with the outer surface of the probe;

wherein said combination probe, which integrates a transceiver, anterna and power source, is provided with 2-way wireless communication means for transmitting information that is transduced and for receiving control and programming signals wirelessly and in real time; and

a single, separate unit in the form of a combination controller and transceiver that is provided with wirelessmeans for sending signals to said probe and for receiving signals therefrom wirelessly and in real time; said signals to said probe comprising i istructions to start, stop, and/or alter the level of stimulation;

wherein a wireless signal feedback loop is provided within said prob : and between said controller and said probe in real time during operation of the sestem and which may be an interactive or closed signal feedback wireless loop.

- 20. (New) A system according to claim 1, wherein said probe is adapted to be programmed to start and/or stop sensing and/or stimulating after a predetermined period of time.
- 21. (New) A system according to claim 1, wherein said probe is adapted to be programmed to change its stimulating activity in response to sensed perineal muscle activity.
- 22. (New) A system according to claim 1, wherein said probe is adapted to be programmed to automatically change its stimulating activity over time.
- 23. (New) A system according to claim 22, wherein said probe is adapted to be programmed to stimulate perineal musculature and/or nerves in cycles of alternating stimulation and rest periods.

Applicate 1 No. 10/017,393
Preliminary Amendment Submitted With RCE Application
Reply to Office Action * ailed 05/09/2007

- 24. (New) A system according to claim 1 wherein said probe and/or said controller are/is provided with memory.
- 25. (New) A system according to claim 1 wherein said probe is adapted to deliver medication.
- 26. (New) A system according to claim 1, wherein an end of said probe is rounded.
- 27. (New) A system according to claim 1, wherein said probe is less than one inch in diameter and less than four inches long.
- 28. (New) A system according to claim 1, wherein said probe is provided with means for facilitating removal from a vagina.
- 29. (New) A system according to claim 1, further comprising a tester for the combination probe unit.
- 30. (New) A package comprising a system according to claim 29 and a holder adapted to hold said combination probe unit, said combination controller unit, and said tester.
- 31. (New) A system according to claim 1, wherein said system is adapted to permit a human user to operate the combination controller and transceiver while the said probe is in the human user's vagina.
- 32. (New) A system for stimulating pelvic muscles and/or nerves in a m. mmal, comprising:

a portable probe unit, said probe unit comprising a substantially cylin irical body having a substantially smooth and substantially sealed outer surface with a n unded end and so dimensioned as to permit comfortable and repeated insertion into, ren oval from, and containment entirely within a mammal's vagina; substantially annular means substantially flush with the outer surface of the body of the probe unit and at apted to deliver electrical pulses; a programmable microprocessor; memory; a batter; and two-way communication means with antenna and adapted to both transmit signals to a controller unit and receive signals from said controller unit wirelessly and in real time; and

a controller unit comprising two-way communication means adapted to both receive signals from said probe unit and transmit signals to said probe unit v irelessly and

Applicatic 1 No. 10/007,393
Preliminary Amendment Submitted With RCE Application
Reply to Office Action) siled 05/09/2007

in real time, wherein said signals to said probe unit comprise instructions to start, stop, and/or alter the activity of the annular means of the probe unit.

- 33. (New) A system according to claim 32, said probe unit and/or said co stroller unit further comprising means for transmitting signals to and/or receiving signals from an external device, network, and/or database, wirelessly and in real time.
- 34. (New) A system according to claim 32, wherein said controller unit is provided with memory.
- 35. (New) A system according to claim 32, wherein said probe unit is addepted to be programmed to start and/or stop delivery of electrical pulses after a predetermined period of time.
- 36. (New) A system according to claim 32, wherein said probe unit is ad pted to be programmed to deliver cycles of alternating electrical pulses and rest periods
- 37. (New) A system according to claim 32, wherein said probe unit is ad apted to be programmed to deliver electrical pulses of varying strengths.
- 38. (New) A system according to claim 32, said probe unit further comp ising means for sensing a vaginal condition.
- 39. (New) A system according to claim 38, wherein said probe unit is ad apted to be programmed to adjust its delivery of electrical pulses in response to a sensed vaginal condition.
- 40. (New) A system according to claim 32, wherein said probe unit is ac apted to deliver medication.
- 41. (New) A system according to claim 32, said probe unit further comp ising means for facilitating removal of the probe from a mammal's vagina.
- 42. (New) A system according to claim 32, wherein said probe unit is less than one inch in diameter and less than four inches in length.
- 43. (New) A system according to claim 32, wherein said probe unit and said controller unit are adapted to be held together, and wherein separation of said probe unit and said controller unit causes said probe unit to turn on.
- 44. (New) A system according to claim 32, further comprising a tester for said probe unit.

Applicatic 1 No. 10/007.393
Proliminary Amendment Submitted With RCE Application
Reply to Office Action 1. ailod 05/09/2007

- 45. (New) A system according to claim 44, further comprising a holder adapted to hold said probe unit, said controller unit, and said tester.
- 46. (New) A system according to claim 32, wherein said controller unit is adapted to be hand-held.
- 47. (New) A system according to claim 32, wherein said controller unit is adapted to permit manual operation and control of said probe unit.
- 48. (New) A system for sensing and transducing vaginal conditions, comprising:
 a portable probe unit comprising a body having a substantially smooth and
 substantially sealed outer surface and adapted to be comfortably, temporarily and
 repeatedly inserted into, contained entirely within, and removed from a user': vagina;
 means for sensing at least one vaginal condition of pH, secretion viscosity, the presence
 of a pathogen, the presence of atypical cells, and activity of pelvic muscles at d/or nerves;
 means for affecting a vaginal condition; a programmable microprocessor; a power
 source; an antenna; and two-way communication means adapted to transmit ignals to a
 controller unit and receive signals from a controller unit, wirelessly and in real time;

said controller unit comprising two-way communication means adapted to receive signals from said probe unit and transmit signals to said probe unit, wirelessly and in real time, said signals to said probe unit comprising instructions to alter activity of the probe;

wherein a wireless signal feedback loop is provided within said probe unit and between said probe unit and said controller unit in real time during operation of the system.

- 49. (New) A system according to claim 48, wherein said probe unit is adapted to sense temperature, a physiological marker of a user's fertility cycle, and/or a metabolic abnormality of the user.
- 50. (New) A system according to claim 48, wherein said probe unit's said means for sensing a vaginal condition and/or said means for affecting a vaginal condition comprises at least one substantially annular electrode.
- 51. (New) A system according to claim 48, wherein said probe unit is a lapted to sample cervical fluid.
- 52. (New) A system according to claim 48, wherein said means for affecting a vaginal condition comprises means adapted to deliver medication.

Application 10/007,393
Preliminary Amendment Submitted With RCE Application
Reply to Office Action F ailed 05/09/2007

- 53. (New) A system according to claim 48, wherein said means for affecting a vaginal condition comprises means for stimulating pelvic muscles and/or nerves.
- 54. (New) A system according to claim 48, wherein said system is adapte 1 to be programmed to adjust its affecting function in response to a sensed vaginal condition.
- 55. (New) A system according to claim 48, wherein said system is adapte 1 to be programmed to start, stop, and/or alter a function after a predetermined perior of time.
- 56. (New) A system according to claim 48, wherein said probe unit and/cr said controller unit further comprises memory.
- 57. (New) A system according to claim 48, wherein said probe unit and/or said controller unit further comprises means adapted to transmit signals to and/or eceive signals from an external device, network, and/or database, wirelessly and in real time.
- 58. (New) A system according to claim 48, wherein the body of said probe unit is substantially cylindrical and has a rounded end.
- 59. (New) A system according to claim 58, wherein said body is less than one inch in diameter and less than four inches in length.
- 60. (New) A system according to claim 48, wherein said probe unit is less than four inches in its greatest dimension.
- 61. (New) A system according to claim 48, said probe unit further compositing means for facilitating removal of the probe from a user's vagina.
- 62. (New) A system according to claim 48, wherein said controller unit s adapted to be hand-held.
- 63. (New) A system according to claim 48, wherein said controller unit is adapted to be operated manually.
- 64. (New) A method for transducing or affecting a vaginal condition in a mammal, said method comprising the steps of:
- (a) activating a portable probe unit comprising a two-way transceive: with antenna, a programmable microprocessor, and a power source;
 - (b) inserting the probe unit substantially entirely into the vagina of a nammal;
- (c) transmitting a signal wirelessly from a control unit outside the va gina to said probe unit and, in real time, transmitting a signal wirelessly from said probe unit to said control unit;

- (d) said probe unit performing at least one activity of sensing a vagina condition, delivering a signal or medication to the vagina, and stimulating pelvic muscle and/or nerves;
 - (e) said probe unit ceasing said sensing, delivering, and/or stimulating activity;
 - (f) removing said probe unit from the vagina; and
- (g) said probe unit and/or said control unit retaining memory of said sonsing, delivering, and/or stimulating activity.
- 65. (New) A method according to claim 64, wherein said control unit is a lapted to be hand-held.
- 66. (New) A method according to claim 64, wherein said vaginal condition is temperature, pH, secretion viscosity, the presence of a pathogen, the presence of atypical cells, a physiological marker of the mammal s fertility cycle, a metabolic abrormality of the mammal, or pelvic muscle contractions.
- 67. (New) A method according to claim 64, wherein said probe unit auto natically ceases its sensing, delivering, and/or stimulating activity after a predetermined period of time.
- 68. (New) A method according to claim 64, wherein said probe unit stirr ulates pelvic muscles and/or nerves in cycles of alternating stimulation and rest periods.
- 69. (New) A method according to claim 64, further comprising a step of said probe unit sampling cervical fluid.
- 70. (New) A method according to claim 64, further comprising a step of said control unit wirelessly transmitting a signal to said probe unit to initiate the step of a tivating the probe unit.
- 71. (New) A method according to claim 64, further comprising a step of said control unit wirelessly transmitting a signal to said probe unit to increase, decrease, stop, and/or start the probe's sensing, delivering, and/or stimulating activity.
- 72. (New) A method according to claim 64, further comprising a step of said probe unit and/or said control unit transmitting a signal to and/or receiving a signal from an external device, network, or database, wirelessly and in real time.
